Its Experts Examine St. Law- Glasgow & Western Increases Owner Will Work Property

Something distinctly new, in the form of a six-inch streak of ore which gives assay returns of 16.22 per cent copper, in assay returns of 16.22 per cent copper, in addition to 32.4 per cent lead, 14.64 ounces in silver and \$1.60 in gold, has been encountered in the bottom of the winze from the 100-foot level of the Pioche Metals company's Point mine. The winze has reached a vertical depth close to fifty feet from the 100 level, after having followed a bed of 35 degrees dip into what is believed to be the fissure, which has a dip of about 70 degrees.

In the winze has been continuously a body of ore two and a half feet thick, a large portion of which is shipping product. Small copper values have been encountered before, but the high copper values in the new streak are an innovation for the mine and for that part of the district. It suggests a possible permanent change, which will be watched with a great deal of interest.

| Application of 16.22 per cent copper, in addition to 32.4 per cent lead, 14.64 ounces in silver and \$1.60 in gold, has been encountered in the bottom of the winze has been encountered has been encountered here. In the bottom of the winze has been encountered before the winze has been encountered before to be the fissure, which has a dip of about 70 degrees.

In the winze has been continuously a body of ore two and a half feet thick, a large portion of which is shipping product. Small copper values have been encountered before, but the high copper values in the new streak are an innovation for the mine and for that part of the district. It suggests a possible permanent change, which will be watched with a great deal of interest.

WEST IS INDEPENDENT.

CANNON BALL MILL READY TO GRIND ORE

That the new mill of the Cannonball Consolidated Mining company, at its mine in Little Smoky valley, Idaho, will surely be in operation by Sept. 1 is the word brought from camp by John Edwards, son of Manager George Z. Edwards, who came to the city to be ready for the opening of school. The starting of the mill has been delayed from time to time by reason of various supplies and

active development work on the Prince Chino Chin

Ore at Samplers. Ore receipts, by carloads, reported yesterday by the samplers: Taylor-Brunton-Utah, 10. Pioneer-Utah, 5; Nevada, 1.

BOSTON AND NEW YORK

for the opening of school. The starting of the mill has been delayed from time to time by reason of various supplies and parts of machinery having gone astray en route, but Manager Edwards is confident now that he has everything needed for operating the plant.

The mine continues to open up most satisfactorily. The tunnel has been extended to the 650-foot point, all in ore, and two raises, in addition to the one in which the shoot of high grade ore was encountered, are being driven. The ore showing in all of the raises exceeds original expectations, so that in the mind of the management absence of doubt as to the company's having a paying proposition has been succeeded by absolute certainty.

EAST PRINCE CON. IS

LATEST TO GET BUSY

One of the newest companies to start active development work on the Prince side of the Pioche district is the East

CARBONATE GEM SAID TO HAVE BIG STRIKE

Report from Morgan county yesterday was that four feet of steel galena ore had been opened in the Carbonate Gem mine, which adjoins the Carbonate Hill property, owned by Matt Daugherty, of this city, and associates. While the report was not fully confirmed, it is regarded by those who know the district and the mine as not at all unlikely that such a strike has been made, and if it is true it means a great deal for both the Carbonate Gem and the Carbonate Hill. The level on which the strike has been made is said to be 300 feet below that from which the Carbonate Hill is now extracting shipping ora, and the lead would soon go into Carbonate Hill ground.

A good bit about our Clear Creek Coal

Seems like we're justified, though, from what our customers tell us every
